

Ambitious surface coating combines
quality and design

FROER PLAHO TEC will give your product the design and functional finish that you expect. We coat both with our facilities as well as manually, surfaces made of plastic, wood, metal and glass.

In doing so we bring structure, effect or special paint to suit your requirements in a particularly resource-saving manner, with state-of-the-art plant technology.

Responsibility and Commitment

Building onto traditions of the FROER Group, we have always been connected the lived family character. Both between management and employees as well as to our customers and suppliers the same liability exists which also sets a goal for our actions. To take responsibility for what we want to do and achieve, connects the interests of all.

Our success is linked to values such as:

- ▼ Honesty and Transparency
- ▼ Credibility and Reliability
- ▼ Quality and Knowledge

We speak openly about everything that serves the achievement of all our goals. We are honest and sincerely strive to provide transparency. This is how challenges are mastered. We promise neither our customers nor our suppliers' things we cannot keep. Therefore, we stand by our promises for the reliability that preserves our credibility. Existing knowledge is valuable but not stable. Only the constant qualification and development of each individual, the plants and processes secures our wealth of experience and makes it in the long term the basis of our success.

PLAHO TEC – a company of tradition

The story of the successful company dates back to the 17th century. At the location in Steinach labor-intensive production of proven wooden toys was operated for a long time. Inventiveness and high quality testified at that time as well as today from the diligent work and the love of detail. Today, we bring these skills to the surface coating. After the takeover of the factory on the 1st of July 1993 from the hands of the trust in the group of companies FROER, the wooden toy production was initially continued. Since 1951, the FROER Group has been active in dental technology, plastic injection molding and toy manufacturing. The synergies that resulted for the other companies within the group in the field of surface finishing and coating ensured the location in Steinach for many years. Since 1994, the factory has been operating under PLAHO GmbH (derived from plastic and wood). In the following years, the focus of production shifted to surface finishing of medical and technical products. The possibilities available today ensure efficient and reliable processing of medium and large coating orders and makes FROER PLAHO TEC a major contract coater in the region.
